

EagleEyes Operating Instructions for Android mobile phones

(HTC Desire as an example)

1. Open your Android Mobile phone's browser and connect <http://www.cpcamglobal.com/mobile/mobile.htm>. Then, select "EagleEyes-Lite for Android" to download EagleEyes into your phone.

2. Select "Install" to begin the installation process of EagleEyes Software. After the installation is completed, select "Open" to activate the EagleEyes Software.

3. Press “+” on the screen. Then, enter the information needed to access your device, such as the IP address, user name, password, port number. Select "OK" after all the information needed is filled in.

4. Select the preview picture to enter the surveillance channel (You can repeat the previous step to add new devices.)

5. Now you should be able to have remote surveillance at anytime from anywhere.

The EagleEyes software for Android will fulfill your basic remote surveillance desire through simply touch control on the phone screen. Through the mobile 3G internet, you can use your Android phone to access your AVTECH / CPcam products anywhere and anytime.

"EagleEyes-Lite" for the Android mobile platform is now released. The compatible devices include AVTECH / CPcam DVRs with USB mouse support, (except DR series) and all AVTECH / CPcam IP cameras. In this version, users are allowed to check live view, switch channels (DVR only), and preview the connected device to ensure the connection information is correct.

More functions, such as Push Message, video playback, and PTZ touch control, will be available soon in "EagleEyes-Plus" for the Android mobile platform.
